§ 80.1093

(i) Through the polar orbiting satellite service on 406.0–406.1 MHz (this requirement may be fulfilled by the 406.0–406.1 MHz EPIRB required by $\S 80.1085(a)(6)$, either by installing the 406.0–406.1 MHz EPIRB close to, or by allowing remote activation from, the position from which the ship is normally navigated); or

§80.1093 Ship radio equipment—Sea areas A1, A2, A3, and A4.

This section contains the additional equipment requirements for ships that sail in all sea areas, *i.e.*, sea areas A1, A2, A3, and A4. Ships fitting in accordance with this section satisfy the requirements denoted in §§ 80.1087, 80.1089, and 80.1091 for sea areas A1, A2, and A3.

- (a) In addition to meeting the requirements of \$80.1085, ships engaged on voyages in all sea areas must be provided with the radio installations and equipment required by \$80.1091(b), except that the equipment required by \$80.1091(b)(3)(ii) cannot be accepted as an alternative to that required by regulation \$80.1091(b)(3)(i), which must always be provided.
- (b) Ships engaged on voyages in all sea areas also must comply with the requirements of §80.1091(c).

§80.1095 Survival craft equipment.

(a) At least three two-way VHF radiotelephone apparatus must be provided on every passenger ship and on every cargo ship of 500 tons gross tonnage and upwards. At least two twoway VHF radiotelephone apparatus must be provided on every cargo ship of between 300-500 tons gross tonnage. Portable two-way VHF radiotelephones must be stowed in such locations that they can be rapidly placed in any survival craft other than liferafts required by Regulation III/26.1.4 of the SOLAS Convention. Alternatively, survival craft may be fitted with a fixed twoway VHF radiotelephone installation. Two-way VHF radiotelephone apparatus, portable or fixed, must conform to performance standards as specified §80.1101. Two-way VHF telephone apparatus provided on board ships prior to February 1, 1992, and not complying fully with the performance standards specified in §80.1101, may be used until February 1, 1999, provided it

is compatible with approved two-way VHF radiotelephone apparatus.

- (b) At least one radar transponder must be carried on each side of every passenger ship and every cargo ship of 500 tons gross tonnage and upwards. At least one radar transponder must be carried on every cargo ship of 300 tons gross tonnage and upwards but less than 500 tons gross tonnage. Such radar transponders must conform to performance standards as specified in §80.1101. The radar transponders must be stowed in such locations that they can be rapidly placed in any survival craft other than liferafts required on cargo ships in forward and aft areas (see Regulation III/26.1.4 of the SOLAS Convention). Alternatively, one radar transponder must be stowed in each survival craft other than those required by Regulation III/26.1.4 of the SOLAS Convention. One of these radar transponders may be radar transponder required by §80.1085(a)(3).
- (c) Survival craft equipment must be tested at intervals not to exceed twelve months. For batteries used for survival craft equipment, the month and year of its manufacture must be permanently marked on the battery. Also, the month and year upon which 50 percent of its useful life will expire must be permanently marked on both the battery and the outside of the transmitter. Batteries must be replaced if 50 percent of their useful life has expired or if the transmitter has been used in an emergency situation.

§80.1099 Ship sources of energy.

- (a) There must be available at all times, while the ship is at sea, a supply of electrical energy sufficient to operate the radio installations and to charge any batteries used as part of a reserve source of energy for the radio installations.
- (b) A reserve source of energy to supply radio installations must be provided on every ship for the purpose of conducting distress and safety radio-communications, in the event of failure of the ship's main and emergency sources of electrical power. The reserve sources of energy must be capable of simultaneously operating the VHF radio installation required by §80.1085(a)(1) and, as appropriate for the sea area or

sea areas for which the ship is equipped, either the MF radio installation required by \$80.1089(a)(1), the MF/HF radio installation required by \$80.1091(a)(2)(i) or \$80.1093(a), or the INMARSAT ship earth station required by \$80.1091(a)(1) and any of the additional loads mentioned in paragraphs (d), (e) and (h) of this section for a period of at least:

- (1) One hour, on ships constructed on or after February 1, 1995;
- (2) One hour, on ships constructed before February 1, 1995, if the emergency source of electrical power complies fully with all relevant requirements of SOLAS, Chapter II-1, Regulation 42 or 43 (as amended); or
- (3) Six hours, on ships constructed before February 1, 1995, and on cargo ships of less than 500 tons gross tonnage, if the emergency source of electrical power is not provided or does not comply fully with all relevant requirements of SOLAS, Chapter II-1, Regulation 42 or 43 (as amended).
- (c) The reserve sources of energy need not supply independent HF and MF radio installations at the same time. The reserve sources of energy must be independent of the propelling power of the ship and the ship's electrical system.
- (d) Where, in addition to the VHF radio installation, two or more of the other radio installations, referred to in paragraph (b) of this section, can be connected to the reserve sources of energy, they must be capable of simultaneously supplying, for one hour, as specified in paragraph (b) of this section, the VHF radio installation and;
- (1) All other radio installations which can be connected to the reserve sources of energy at the same time; or
- (2) Whichever of the other radio installations will consume the most power, if only one of the other radio installations can be connected to the reserve sources of energy at the same time as the VHF radio installation.
- (e) The reserve sources of energy may be used to supply the electrical lighting required by §80.1083(b)(4).
- (f) Where a reserve source of energy consists of a rechargeable accumulator battery or batteries:
- (1) A means of automatically charging such batteries must be provided

which must be capable of recharging them to minimum capacity requirements within 10 hours; and

- (2) The capacity of the battery or batteries must be checked, using an appropriate method, at intervals not exceeding 12 months. These checks must be performed when the vessel is not at sea.
- (g) The accumulator batteries which provide a reserve source of energy must be installed to ensure: The highest degree of service, a reasonable lifetime, reasonable safety; that the battery temperatures remain within the manufacturer's specifications whether under charge or idle; and that when fully charged, the batteries will provide at least the minimum required hours of operation under all weather conditions.
- (h) If an uninterrupted input of information from the ship's navigational or other equipment to a radio installation required by this subpart is needed to ensure its proper performance, means must be provided to ensure the continuous supply of such information in the event of failure of the ship's main or emergency source of electrical power.
- (i) An uninterruptible power supply or other means of ensuring a continuous supply of electrical power, within equipment tolerances, shall be provided to all GMDSS equipment that could be affected by normal variations and interruptions of ship's power.

EFFECTIVE DATE NOTE: At 68 FR 46977, Aug. 7, 2003, §80.1099 was amended by revising paragraph (f)(2) and (h), effective October 6, 2003. For the convenience of the user, the revised text is set forth as follows:

§80.1099 Ship sources of energy.

* * * *

(f) * * *

(2) Battery charge levels should be checked at intervals of 30 days or less with equipment turned ON and the battery charger turned OFF. Portable equipment with primary batteries such as EPIRBs and SARTs should be checked at the same intervals using methods recommended by the manufacturer. The results of battery checks should be recorded in the radio log.

* * * * *

(h) If an uninterrupted input of information from the ship's navigational or other equipment to a radio installation required by

§ 80.1101

this subpart (including the navigational receiver referred to in SOLAS Chapter IV, Regulation 18) is needed to ensure its proper performance, means must be provided to ensure the continuous supply of such information in the event of failure of the ship's main or emergency source of electrical power.

§80.1101 Performance standards.

- (a) The abbreviations used in this section are as follows:
- (1) International Maritime Organization (IMO).
- (2) International Telegraph and Telephone Consultative Committee (CCITT).
- (3) Ínternational Electrotechnical Commission (IEC).
- (4) International Organization for Standardization (ISO).
- (5) International Radio Consultative Committee (CCIR).
- (b) All equipment specified in this subpart must meet the general requirements for shipboard equipment listed in this paragraph, which are incorporated by reference.
- (1) IMO Resolution A.694(17), "General Requirements for Shipborne Radio Equipment Forming Part of the Global Maritime Distress and Safety System (GMDSS) and for Electronic Navigational Aids," adopted 6 November 1991.

 (2) CCITT Recommendation E.161,
- (2) CCITT Recommendation E.161, "Arrangement of Figures, Letters and Symbols on Telephones and Other Devices that Can Be Used for Gaining Access to a Telephone Network," 1989.
- (3) CCITT Recommendation Q.11, "Numbering Plan for the International Telephone Service," 1989.
- (4) IEC Publication 92-101, "Electrical Installations in Ships," Third Edition 1980 with amendments through 1984
- (5) IEC Publication 533, "Electromagnetic Compatibility of Electrical and Electronic Installations in Ships," First Edition 1977.
- (6) IEC Publication 945, "Marine Navigational Equipment," First Edition 1988.
- (7) ISO Standard 3791, "Office Machines and Data Processing Equipment—Keyboard Layouts for Numeric Applications," First Edition 1976(E).
- (c) The equipment specified in this subpart must also conform to the ap-

propriate performance standards listed below which are incorporated by reference.

- (1) NAVTEX receivers: (i) IMO Resolution A.525(13), "Performance Standards for Narrow-band Direct Printing Telegraph Equipment for the Reception of Navigational and Meteorological Warnings and Urgent Information to Ships," adopted 17 November 1983.
- (ii) CCIR Recommendation 540-2, "Operational and Technical Characteristics for an Automated Direct-printing Telegraph System for Promulgation of Navigational and Meteorological Warnings and Urgent Information to Ships," 1990.
- (2) VHF radio equipment: (i) IMO Resolution A.609(15), "Performance Standards for Shipborne VHF Radio Installations Capable of Voice Communication and Digital Selective Calling," adopted 19 November 1987.
- (ii) CCIR Recommendation 493-4, "Digital Selective-calling System for use in the Maritime Mobile Service," 1990.
- (3) MF radio equipment: (i) IMO Resolution A. 610(15), "Performance Standards for Shipborne MF Radio Installations Capable of Voice Communication and Digital Selective Calling," adopted 19 November 1987.
- (ii) CCIR Recommendation 493-4, "Digital Selective-calling System for use in the Maritime Mobile Service," 1990.
- (4) MF/HF radio equipment: (i) IMO Resolution A.613(15), "Performance Standards for Shipborne MF/HF Radio Installations capable of Voice Communication, Narrow-band Direct Printing and digital Selective Calling," adopted 19 November 1987.
- (ii) CCIR Recommendations 493-4, "Digital Selective-calling System for use in the Maritime Mobile Service," 1990.
- (iii) CCIR Recommendation 625–1, "Direct-printing Telegraph Equipment Employing Automatic Identification in the Maritime Mobile Service," 1990. Equipment may conform to CCIR Recommendation 476–4, "Direct-Printing Telegraph Equipment in the Maritime Mobile Service," 1986, in lieu of CCIR Recommendation 625–1, where such equipment was installed on ships prior to February 1, 1993.
